

DiaSense AI — Health Risk Screening Report

Artificial Intelligence Medical Assessment & Clinical Insights

Patient Name: John Doe

Email: patient@diasense.ai

Age / Gender: 34 yrs / Male

Report ID: REP-00108

Assessment Date: August 23, 2026

AI Engine Status: Active (XGBoost 99.20% Accuracy)

1. AI Diabetes Risk Screening Summary

Risk Classification: NON-DIABETIC / LOW RISK (14.2% Risk Score)

Statistical Probability Score: **14.2%** | Model Confidence: 96.8%

2. Recorded Vitals & Laboratory Metrics

Parameter	Recorded Value	Reference Threshold
Fasting Blood Glucose	92.0 mg/dL	< 100 mg/dL Normal
Blood Pressure (Diastolic)	74.0 mmHg	< 80 mmHg Normal
BMI (Body Mass Index)	22.8 kg/m²	18.5 – 24.9 Normal
Insulin Level	45.0 uU/mL	16 – 166 uU/mL Normal
Skin Thickness	21.0 mm	10 – 30 mm Normal
Diabetes Pedigree Score	0.28	< 0.50 Normal

3. Clinical Risk Factor Analysis & Explainability

Risk Factor	Value	Impact Level	Description
Blood Glucose	92.0 mg/dL	Optimal	Fasting blood glucose level within healthy normal range (<100 mg/dL).
BMI (Body Mass Index)	22.8	Optimal	BMI is within normal healthy range (18.5–24.9).

4. Recommended Personalized Interventions

- **Dietary Guidance:** Maintain a low-glycemic, balanced diet rich in leafy greens, whole grains, and lean proteins. Limit processed sugars.
- **Physical Activity:** Sustain at least 150 minutes per week of moderate aerobic exercise (brisk walking, swimming, cycling).
- **Routine Screening:** Repeat annual fasting blood glucose screenings to track ongoing metabolic health.
